

## What a placement might look like

Placements on the In2STEM programme are extremely varied. We have a large selection of placements happening across the UK in different institutions and STEM subjects.

Here is a little about what you can expect from your placement with an In2STEM host volunteer.

**Important:** Medicine placements do not include shadowing or working with doctors or nurses in hospitals or GP surgeries. Unfortunately, they are too busy to volunteer.

Research based **medicine placement** in a university - this will involve working with researchers in a lab. You might shadow them doing experiments or get to do some yourself.

An eye-opening **engineering placement** with an engineering company. You might oversee groundbreaking engineering projects taking place and get involved in designing yourself.

An innovative **computer science or tech based** placement in a university. You might get to test new models or software and learn about the complexities of cyber security.

Research based **environmental science placement** in a university. You might be involved in cutting edge research relating to climate change and sustainability.

Research based **physics placement** in a university. You might take part in investigations into our atmosphere, use telescopes and super-computers!

A **healthcare based placement** with a scientist in a hospital. You might get to see how diagnostics work as well as clinical trials.
