

Empowering future STEM talent through our programmes

Who is In2scienceUK?

In2scienceUK is a national social mobility charity committed to transforming the lives of young people from low socioeconomic backgrounds and underrepresented groups through science, technology, engineering and maths (STEM).

How do we empower young people?

We believe that innovation can only be driven when opportunities in STEM are accessible for all. Yet, without relevant role models, resources and real-world experience, many talented young people are held back from achieving their ambitions.

In2scienceUK's programmes break down these barriers by providing hands-on work experience, networking events, interactive workshops and mentoring.

How do we make a difference?

Through our programmes, young people have the opportunity to:

Develop relevant practical and professional skills

Learn about different pathways in STEM through placements and careers panels

Pursue their passion for specific STEM subjects

Access inclusive STEM opportunities

Join a community and gain a sense of belonging in STEM

Improve their confidence in pursuing a future in STEM with supportive role models
